

OfficePark Landing Page Design & Technical Brief

A build guide for Akbar: visual direction, layout flow, technical rules, and acceptance criteria for the first live OfficePark landing page.

Project	OfficePark one-page landing page
Purpose	Create a credible live trust anchor for OfficePark before the full website.
Build Type	Static, mobile-first landing page.
Hosting Target	Netlify.
Design Direction	Premium, clean, black/white/gold, tech-startup feel.
Use With	OfficePark Landing Page Writing Content PDF.

- This is not a full website. It is a focused one-page trust and conversion page.
- The page must be simple, fast, credible, and easy to deploy.
- Use the writing-content PDF for words. Use this document for design and build direction.

1. Strategic Definition

The landing page must make OfficePark look real, organized, and easy to contact. It should close the trust gap when a lead asks: "Do you have a website?"

The page is not trying to explain every future OfficePark idea. It exists to create enough clarity and confidence for a visitor to click WhatsApp or request a quote.

Priority	Meaning
Trust	The visitor must feel OfficePark is a real company with a structured process.
Clarity	The visitor must understand the core services within seconds.
Action	The visitor must know exactly how to contact OfficePark or request a quote.

Main Conversion Flow

- Visitor lands from Facebook, Google Business Profile, WhatsApp, LinkedIn, X, or Instagram.
- Hero explains what OfficePark builds.
- Services explain the four core offers.
- Why/Process sections build trust without fake testimonials.
- CTA pushes the visitor to WhatsApp or quote forms.

2. Design Position

OfficePark should feel like a serious South African tech startup with premium ambition. It must not look like a cheap generic agency template.

Area	Direction
Visual Mood	Clean, confident, premium, modern, business-first.
Colours	Black, white, grey, and OfficePark gold as the accent.
Typography	Modern sans-serif. Strong headings, readable body text, generous spacing.
Visuals	Minimal icons, device mockups, subtle abstract shapes. Avoid heavy image clutter.
Animation	Light and subtle only. No heavy motion that slows the page.
Mobile	Must look excellent on phone. Mobile is not an afterthought.

Avoid

- Generic "leading IT company" copy or template energy.
- Fake corporate stock photos with random people smiling at laptops.
- Overcrowded sections, tiny text, too many colours, or weak spacing.
- Portfolio/testimonial sections that imply fake proof.
- Anything that makes OfficePark look like a freelancer page instead of a company.

3. Corporate Design Inspiration Sources

Use these links for inspiration only. Do not copy them directly. Pull layout ideas, visual hierarchy, conversion flow, spacing, and corporate polish.

Source	Use It For
Siteinspire - Corporate Websites https://www.siteinspire.com/websites/category/corporate	Minimal corporate layouts, strong grids, clean spacing, premium visual discipline.
DesignRush - Best Corporate Website Designs https://www.designrush.com/best-designs/websites/corporate	Current corporate presentation ideas, hero styles, service flow, visual polish.
Hostinger - Corporate Website Design Ideas https://www.hostinger.com/tutorials/corporate-website-design	Practical section structure, common corporate website elements, clarity ideas.
Webstacks - Best Corporate Website Examples https://www.webstacks.com/blog/corporate-website-design	B2B conversion flow, trust sections, CTA placement, navigation logic.

Important Note

OfficePark must still follow its own identity: black, white, gold, South African startup, practical digital systems, and clear conversion. The references are for direction, not cloning.

4. Page Layout Flow

The page should be built as a clean vertical landing page with strong section separation. Each section should have one job.

Section	Purpose	Design Notes
Hero	Explain the offer immediately and create action.	Strong headline, short subtext, two CTA buttons, premium visual background.
Services	Show the four core services.	Four clean cards: Websites, Apps, AI Automation, Custom Software.
Why OfficePark	Build trust and positioning.	Short text plus proof points. Avoid overclaiming.
How It Works	Reduce uncertainty.	Six-step process: Discover, Scope, Quote, Build, Review, Launch.
Capability / Process Proof	Show structure without fake testimonials.	Forms, catalogue, Google Business Profile, CRM/process, developer network.
Final CTA	Push visitor to contact.	Simple closing statement and buttons.
Footer	Company information and links.	OfficePark (Pty) Ltd, Cape Town, services, contact/social links.

5. Section-by-Section Design Notes

Hero

Make this strong. The visitor must understand OfficePark in 5 seconds. Use the main headline from the writing-content PDF. CTA buttons should be visible above the fold.

Services

Use clear service cards with short descriptions. Do not overload with features. The goal is quick understanding.

Why OfficePark

Position OfficePark as a structured South African startup. Avoid pretending to be a giant corporate.

How It Works

Use a simple step-by-step process. This section must make the business feel organized.

Capability / Proof

Use process proof, not testimonials. This can include forms, catalogue, CRM/project tracking workflow, Google Business Profile, and developer network.

Final CTA

Keep this direct. The visitor must know whether to request a quote or chat on WhatsApp.

6. Mobile-First Requirements

Most leads will open the landing page on their phones. The mobile version must feel designed, not squeezed.

Element	Mobile Requirement
Navigation	Simple logo + menu/CTA. Avoid clutter.
Hero	Stack content cleanly. Headline first, then subtext, then buttons.
Service Cards	Stack vertically with enough spacing and readable text.
CTA Buttons	Large enough for thumb taps. WhatsApp button must be obvious.
Images/Visuals	Optimized and not too heavy. No layout-breaking images.
Footer	Readable, clean, and not too dense.

Performance Expectations

- Fast first load.
- Compressed images/assets.
- No heavy animation libraries unless absolutely needed.
- Clean spacing on desktop, tablet, and mobile.
- No horizontal scrolling on mobile.

7. Technical Requirements

The landing page must be simple to own, deploy, and maintain. Do not introduce unnecessary monthly hosting or backend complexity.

Requirement	Instruction
Build Type	Static one-page landing page.
Preferred Stack	HTML/CSS/JavaScript or React static build.
Hosting Target	Netlify.
WordPress	No WordPress for this version.
Backend/Database	No backend, no database, no CMS.
Forms/CTAs	Use WhatsApp and external quote form links. No complex form backend.
SEO	Basic page title, meta description, headings, and clean structure.
Ownership	Full source code and deployment-ready files must be delivered.

8. Deliverables Checklist

- Fully designed and developed one-page landing page.
- Mobile responsive layout.
- Desktop, tablet, and mobile tested layout.
- WhatsApp CTA button working.
- Quote form CTA button(s) working once links are provided.
- Basic SEO setup.
- Netlify-ready files.
- Full source code delivered.
- Small revisions included.
- Deployment/domain support if needed.

Acceptance Criteria

- No placeholder text such as Lorem ipsum.
- No broken links or dead CTA buttons.
- No visual clutter or generic agency-template look.
- No fake testimonials or fake portfolio claims.
- No hidden backend, database, WordPress, or monthly hosting dependency.
- The final page must feel credible enough to send to real leads.

9. Asset and Link Checklist

These items should be provided before build starts or during the first handover message.

Asset / Link	Status / Note
OfficePark logo	Must be sent. Use the official OP Crown Mark.
Writing Content PDF	Already created. Use it for page copy.
WhatsApp link	Needed for Chat on WhatsApp CTA.
Quote form links	Needed for Request a Quote CTA. If not ready, use WhatsApp first.
Social links	Facebook, Instagram, X, LinkedIn if available.
Corporate inspiration links	Use as inspiration only, not direct copying.
Old OfficePark mockups	Optional internal direction only. Do not copy directly.

Final Build Rule

This landing page is Version 1. It must be live, clean, credible, fast, and conversion-focused. Do not overbuild it. Do not make it too plain either. The correct balance is premium simplicity.
